PROJECT SUMMARY

Solution Architect on the making showcasing my different projects in the area of Cloud Computing. I will be using mostly AWS projects from different workshops but I will showcasing different technologies used on the Cloud.

TECHNOLOGY USED IN PROJECTS

GutHub	AWS
Visual Studio Code	Python
Docker	Anaconda
Linux	

PROJECTS

AWS Army vs Navy DeepRacer Competition 2022

- AWS DeepRacer gives you an interesting and fun way to get started with reinforcement learning (RL). RL is an advanced machine learning (ML) technique that takes a very different approach to training models than other machine learning methods. Its super power is that it learns very complex behaviors without requiring any labeled training data, and can make short term decisions while optimizing for a longer term goal.
- Successfully learn the basic concept of AWS DeepRacer resulting on Second Place out of 8 experience teams.
